

Keep the sounds of your life playing on

Why is hearing care important?

Hearing changes can be temporary and caused by simple things like ear wax or a cold. It can also indicate permanent damage to the tiny hair-like cells in the inner ear as a result of exposure to noise, aging, other health conditions, or certain medications.

When should I get my hearing checked?

Hearing changes can come on so gradually that you may not even notice it's happening. In general, you should have your hearing screened every three to five years, and tested annually if you are over the age of 50 or experiencing any of the following:

- **Consistent exposure** to loud noises
- **Difficulty understanding** in noisy environments or in groups
- **Asking people to repeat themselves** or feeling like they are not speaking clearly
- **Ringing** in your ears

How can I check my hearing?

Getting your hearing checked is now easier than ever with in-person and at-home options:

- **Virtual screening** allows you to confirm if hearing loss is detected from the comfort of home with the help of a Remote Care Advocate
- **In-person hearing evaluation at a network clinic near you.** A hearing care professional will work with you to complete an in-depth evaluation of your hearing and propose solutions if hearing loss is detected.
